Examiner, Art Unit 2835

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The allowability resides in the overall structure of the device as recited in sole independent claim 12, and at least in part, because claim 12 recites: "A bimetallic thermostat with exchange contacts comprising: an external support covering; and an internal device comprising: a pierced base provided with a packing and with electric contacts on one side for electric connection with the outside of the bimetallic thermostat, wires electrically connected with said electric contacts and extending from an opposite side of said base; a relay arranged at said opposite side of the base and electrically connected with said base, a sensitive thermostatic element provided with feet permanently electrically connected with said relay, an insulating plate physically interposed between the relay and the sensitive thermostatic element, a printed circuit provided on one face of said insulating plate and comprising passing-through slots for housing the feet of the sensitive thermostatic element, first holes for receiving ends of said wires opposite to said electric contacts, second holes for fastening of the relay, first routes for electrically connecting said first holes with said second holes and second routes for electrically connecting said second holes with said slots while maintaining electrically separated said slots and said first holes so that the insulating plate prevents electrical interferences between said feet of the sensitive thermostatic element and said wires." (emphasis added). The aforementioned limitations in combination with all remaining limitations of claim 12, are believed to render the claim and all claims dependent therefrom (claims 10-11) patentable over the art of record.

2. None of the references cited during prosecution of the instant application, either taken alone or in combination, is believed to render the present invention unpatentable as claimed. It is believed that the references do not teach or suggest the structural and electrical connection of the overall thermostat, and namely the wires extending from an opposite side of said base, the relay arranged at said opposite side of the base and electrically connected with said base, the feet permanently electrically connected with said relay and being housed in the passing-through slots of the printed circuit on the insulating plate, and the insulating plate being physically interposed between the relay and the sensitive thermostatic element.

Futhermore, the Examiner has performed inventor and assignee searches for possible double patenting issues. No documents with conflicting claims have been identified.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to BRADLEY H. THOMAS whose telephone number is (571)272-9089. The examiner can normally be reached on 7:00am - 3:30pm (Eastern).
